Warm Mix Asphalt (WMA) Guide Specification for Highway Construction

Division 400 - Asphalt Pavements and Surface Treatments

SECTION 406 - WARM MIX ASPHALT (WMA) PAVEMENT

Warm mix asphalt (WMA) is the generic term used to describe the reduction in production, paving, and compaction temperatures achieved through the application of one of several WMA technologies.

Some modifications to HMA plants may be necessary to accommodate the WMA technologies as noted in Section 406.03 Construction.

Production and paving temperatures may need to be increased for higher recycled asphalt pavement (RAP) contents, increased haul distances, decreased ambient temperatures, or other WMA project specific conditions.

All provisions for the production and placement of conventional HMA mixtures as stipulated in Standard Specification for Construction and Bridges on Federal Highway Projects (FP), Section 403 are in force except as noted below.

406.01 Description

Construct one or more courses of plant produced warm mix asphalt (WMA) pavement on a prepared foundation, using virgin aggregate or a combination of virgin and/or reclaimed aggregate material (RAM) and prescribed manufactured WMA additives and/or WMA plant process modifications. Use of RAP materials, consisting of cold milled, crushed, or processed bituminous asphalt mixture are permitted at the current 25 percentages, provided that the mixture meets all the requirements of these specifications.

406.02 Material

WMA may be produced by one or a combination of several technologies involving HMA plant foaming processes and equipment, mineral additives, or chemicals that allow the reduction of mix production temperatures to within 185°F to 275°F. *(Note: The upper temperature range is appropriate for modified asphalt binders and WMA mixtures which include higher percentages of reclaimed asphalt pavement.)*

Provide materials as specified in:

Aggregate	Subsection 703.07 or 703.17
Antistrip additive	Subsection 702.08
Asphalt binder	Subsection 702.01
Mineral Filler	Subsection 725.05
Recycled Asphalt Pavement	Subsection 703.19
Recycling Agent	Subsection 702.06

406.03 Construction

A. *Mix Design.* Develop and submit a job mix formula for each mixture according to AASHTO R 35. Each job mix formula must be capable of being produced, placed, and compacted as specified. Apply all mix design requirements for HMA to the development of the WMA mix design.

Submit a written job mix formula for review and approval at least 28 days before production, or when sources of asphalt binder, aggregates, WMA additives, or other components of the mix change.

Submit the following information:

1. All information required in the report section of AASHTO R 35.
2. WMA technology and/or WMA additives information.
3. WMA technology manufacturer's established recommendations for usage.
4. WMA technology manufacturer's established target rate for water and additives, the acceptable variation for production, and documentation showing the impact of excessive production variation.
5. WMA technology material safety data sheets (MSDS).
6. Documentation of past WMA technology field applications including project type, project owner, tonnage, location, mix design, mixture volumetrics, field density, and performance.
7. Temperature range for mixing.
8. Temperature range for compacting.
9. Asphalt binder performance grade test data over the range of WMA additive percentages proposed for use.
10. WMA mixture performance test results.
11. Laboratory test data, samples and sources of all mixture components, and asphalt binder viscosity-temperature relationships.

B. *Additives.* Use anti-stripping additives, silicone additives, WMA additives, and WMA technologies as specified. Comply with approved mix design quantities. Confirm the addition rate through field tests performed during production. Comply with the manufacturer's recommendations for incorporating additives and WMA technologies into the mix. Comply with manufacturer's recommendations regarding receiving, storage, and delivery of additives. Maintain supplier recommendations on file at the asphalt mixing plant and make available for reference while producing WMA.

C. *Sampling.* Perform sampling according to the following standards:

1. *Aggregate.* AASHTO T 2.
2. *Asphalt Binder.* AASHTO T 40.
3. *Warm Mix Asphalt (WMA) Plant Mix.* AASHTO T 168.

D. *Weather Limitations.*

1. Place WMA mixtures only on dry, unfrozen surfaces and only when weather conditions allow for proper production, placement, handling, and compacting.
2. Meet Table 401-2 placement temperatures.

E. *Equipment.* Use equipment and WMA technologies capable of producing an asphalt mixture that meet specification requirements and is workable at the minimum placement and compaction temperature desired, regardless of storage or haul distance considerations.

1. *Asphalt Mixing Plant.* Meet AASHTO M 156 and FP Subsection 401.04.

Modify the asphalt mixing plant as required by the manufacturer to introduce the WMA technology.

Plant modifications may include additional plant instrumentation, the installation of asphalt binder foaming systems and/or WMA additive delivery systems, tuning the plant burner and adjusting the flights in order to operate at lower production temperatures and/or reduced tonnage.

(Note: Implementation of best management practices in the control of aggregate moisture content prior to introduction to the drying or mixing drum is highly recommended in order to achieve the maximum benefit of WMA technology.)

Combine and mix the dried aggregates and asphalt binder to meet the job mix formula. Ensure a minimum of 95 percent uniform coating of aggregates according to AASHTO T 195.

Correct procedures if storing or holding causes segregation, excessive heat loss, or a reduced quality mixture. Properly dispose of mixture which does not meet specifications.

G. Preparing Base or Existing Surface. Clear surface of debris and deleterious material. Apply and cure tack coat before placing the WMA. Apply a tack coat on all surfaces, curbs, gutters, manholes, or other structure surfaces, that will be in contact with the WMA.

Repair damaged areas of the base or existing surface. Restore the existing surface or base to a uniform grade and cross section before placing the mix.

H. Pre-paving Requirements. Prior to placing any WMA mix, produce a sufficient amount of WMA mix to properly calibrate the plant and procedures using the mix design approved for mainline construction. The Engineer will sample and test the WMA mix thus produced for the following:

1. Voids in mineral aggregate (VMA);
2. Asphalt binder content;
3. Gradation;
4. Air voids; and
5. Tensile strength ratio (or Hamburg wheel tracking test for moisture damage)

Heat WMA field samples, transported to the laboratory, to the field production temperature, or lower, when reheating is required for WMA mixture testing.

(Note: Field produced WMA loose mix samples which are immediately compacted and tested, without reheating, may produce lower voids in mineral aggregate and lower air voids test results when compared to reheated samples. This should be validated during the test strip or initial production lot. One possible remedy is to cool the WMA sample to room temperature and reheat to a temperature that is less than or equal to the WMA field production temperature before laboratory compaction. This will minimize the WMA technology's effects on the test results and ensures the sample is not excessively aged.)

Place no WMA mixture that fails to meet specification requirements. WMA mixture not meeting the requirements may be used in the construction of temporary facilities when approved by the Engineer.

Construct a control strip or initial production lot with production materials and equipment. Select compacting methods to meet the specified density. The Engineer will take random loose mix and core samples to verify compliance with job mix and specification requirements. Reconstruct the test strip or initial production lot if the job mix formula, the compacting method, or compacting equipment changes,

or if results do not meet specifications.

I. Spreading and Finishing. Spread and finish the mixture with asphalt pavers to specified grade and thickness.

Hand place material in areas inaccessible to mechanical spreading and finishing equipment. Maintain a consistent supply of mixture to ensure uninterrupted paving.

Minimize inconvenience to traffic and protect existing and finished surfaces. Leave only short lane sections, normally less than [26 ft (8 m)], where the abutting lane is not placed the same day, or according to Manual on Uniform Traffic Control Devices (MUTCD) traffic safety requirements.

J. Compacting. Compact immediately after spreading and before the WMA mixture falls below the minimum job mix design compaction temperature. Discontinue paving if unable to achieve the specified density before the mixture cools below the minimum recommended WMA job mix design compaction temperature.

Provide the number, weight, type, and sequence of rollers necessary to compact the mixture without displacing, cracking, or shoving. Roll the WMA mixture parallel to the centerline. Begin rolling superelevated curves at the low side and continue to the high side, overlapping longitudinal passes parallel to the centerline.

Maintain a uniform roller speed with the drive wheels nearest the paver. Operate vibratory rollers uniformly at the manufacturer's recommended speed and frequency.

Continue rolling to eliminate all roller marks and to achieve the minimum 92 percent of laboratory density as determined according to AASHTO T 209.

Maintain the line and grade of the edge during rolling.

Prevent the mixture from adhering to the rollers by using very small quantities of detergent or other approved release material.

Hand compact areas inaccessible to rollers.

The Engineer will take random tests of the compacted pavement to verify specification compliance. At no cost to the Agency, remove and replace mixture that does not meet specification requirements or that becomes contaminated with foreign materials. Remove defective materials for the full thickness of the course by saw cutting the sides perpendicular and parallel to the direction of traffic. Coat saw cut edges with bituminous materials and replace the defective material with specification materials.

K. Joints. Protect ends of a freshly laid mixture from damage by rollers. Form transverse joints to expose the full depth of the course. Apply a tack coat on transverse and longitudinal joint contact surfaces immediately before paving. Construct all longitudinal joints within 12 in. (300 mm) of the lane lines. Offset longitudinal and transverse joints on succeeding lifts 6 inches (150 mm) to 12 inches (300 mm) from the joint in the layer immediately below. Create the longitudinal joint in the top layer along the centerline of two-lane highways or at the lane lines of roadways with more than two lanes.

L. Surface Tests. The Engineer will test pavement surfaces to verify compliance with FP Subsection 401.16, smoothness and texture requirements.

Correct pavement surfaces that do not meet specification requirements by cold milling, diamond grinding, overlaying, or removing and replacing according to the following:

a. *Diamond Grinding.* Diamond grind final pavement surfaces exposed to vehicle traffic to the required surface tolerance and cross section. Remove and dispose of all waste material.

b. *Cold Milling.* Cold mill intermediate pavement surfaces to the required surface tolerance and cross section. Remove and dispose of all waste materials.

c. *Overlaying.* Use specification materials for overlays. Overlay the full width of the underlying pavement surface. Place a minimum recommended overlay thickness of [1.6 in. (40 mm)]. Use only one overlay.

d. *Removing and Replacing.* Replace rejected areas with WMA pavement materials that meet specification requirements. Test the corrected surface area. Complete all corrections before determining pavement thickness.

406.04 Measurement

The Engineer will measure work acceptably completed as specified in Subsection 109.02. The Engineer will base quantities of asphalt binder on the theoretical mass incorporated into accepted product as verified by samples taken according to Subsection 702.01.

406.05 Payment

Include costs of plant startup operations, considering both labor and materials, in the price bid for the mixture in place.

The Agency will pay for accepted quantities at the contract unit price as follows:

Pay Item Pay Unit

(A) Asphalt Binder ton (Mg), gal (L)

(B) WMA Plant Mix—Type _____ ton (Mg), yd² (m²)

Such payment is full compensation for furnishing all materials, equipment, labor, and incidentals to complete the work as specified.

Safety EdgeSM

Pavement edge drop-off on highways has been linked to many serious crashes, including fatal collisions. To mitigate vertical drop-offs, FHWA advocates installing the Safety EdgeSM on pavements during paving or resurfacing projects. This technology allows drivers who drift off highways to return to the pavement safely.

Roadway departures account for over half of all fatal crashes. Not all of these crashes involve speeders and drunk drivers. Some could have been easily prevented if a vertical pavement edge drop-off had not been present.

Many of these tragedies might have been prevented by a cutting-edge technology known as the Safety EdgeSM. This simple, inexpensive solution is a focus of the FHWA's *Every Day Counts* program.

Pavement Edge Drop-offs

Drop-offs occur when there are height differences between a paved road and the adjacent graded material. Conventional paving techniques result in vertical or nearly vertical pavement edges, which can cause safety concerns when they are exposed.

National crash data is lacking on edge drop-off issues, but the existing data is compelling. In Iowa, pavement edges may have contributed to as many as 18% of rural run-off road crashes on paved roads with unpaved shoulders during 2002-2004. In Missouri, that percentage was nearly 25%. These statistics were strong motivation for the FHWA's ground-breaking Safety EdgeSM initiative.

Why Vehicles Leave the Road

Drivers leave the paved road for many reasons. Some may need to avoid a drunk driver or a roadway obstruction. Others are drowsy or distracted by a phone call, a text message, a GPS device, or a passenger. It is particularly easy to leave the paved road when visibility is low.

Returning to the paved road can be challenging when vertical edge drop-offs are present. A driver who doesn't slow down before attempting to steer back onto the pavement can easily lose control of the car. One State found that drop-off crashes are four times as likely to include a fatality than other

types of crashes on similar roads.

The Safety EdgeSM Solution

The Safety EdgeSM is an uncomplicated and effective solution to mitigate pavement edge-related crashes. When done correctly, simply shaping the edge of the pavement to 30 degrees can eliminate the problem of vertical drop-off. Research has shown this "shape is considered conservative in that the transition from on-roadway surface to shoulder and back is so smooth it defies assignment of any degree of severity, except when the elevation change from pavement to shoulder causes a noticeable tilt in the vehicle."

The Safety EdgeSM provides a strong, durable transition for all vehicles that are particularly vulnerable, such as smaller, lighter cars or motorcycles. Even at relatively high speeds, vehicles can return to the paved road smoothly and easily.

As with conventional paving, the graded material adjacent to the Safety EdgeSM should be brought flush with the top of the pavement following paving. The Safety EdgeSM concept is that when drop-offs recur, they will not be vertical, but a shape that will not induce tire scrubbing.

Avoiding Tire Scrubbing

Without the Safety Edge, a vertical or near-vertical pavement edge can become exposed. Attempts to return to the road can create "tire scrubbing" as the tire rubs intensely against the vertical edge, causing friction between the wheel and the pavement.

If the driver overcompensates by steering too hard, the vehicle can fishtail, swerve into another lane, or go off the road entirely. The vehicle may roll over or be thrown into oncoming traffic.

Inexperienced drivers are not the only victims of tire scrubbing. Smaller, lighter vehicles have a harder time climbing a steep pavement edge. At high speeds, the climb is particularly dangerous.

Whereas a vertical drop-off of 2.5 inches or greater has been shown to be problematic at speeds of 55-60 mph, drop-offs of up to 5 inches with the Safety EdgeSM are traversable at these speeds.

Added Benefits to the Safety EdgeSM

The Safety EdgeSM also improves density at the pavement edge, which makes the pavement more durable. Less frequent road maintenance may be needed as edge raveling is reduced.

The Safety EdgeSM is also easy to install. A commercially available shoe can be mounted on asphalt resurfacing equipment. An attachment acts as a screed extension. As the asphalt is extruded, it confines the asphalt into the desired 30 degree shape.

Although generic devices that provide a 30-degree angled shape can also be used, they typically only cut the pavement into the correct angle, but do not consolidate the asphalt. This leaves the edge more open to breaking off.

The Safety EdgeSM is inexpensive to install. Typically less than 1% additional asphalt is required, since the Safety EdgeSM technology compacts the loose asphalt that would otherwise crumble.

The Safety EdgeSM is also recommended for concrete pavements where the edge is adjacent to an unpaved surface. This may call for other considerations, including an increase in materials.

The Safety EdgeSM Challenge

The Safety EdgeSM is a proven solution that requires minimal cost and time. By including the Safety EdgeSM detail while paving, this countermeasure can be implemented system-wide at a very low cost. FHWA's goal is to accelerate the implementation of the Safety EdgeSM technology, so that more lives can be saved.

The FHWA has joined with state and local agencies in 20 states to sponsor or initiate project demonstrations installing this technology. Working together with State partners, contractors, equipment manufacturers, and the industry on this 21st century initiative, we can prevent the tragedy of pavement edge drop-offs.

SUPPLEMENTAL SPECIFICATION 159 ON THE JOB TRAINING (OJT) PROGRAM

DESCRIPTION

- 159.01** **Scope and Goal** - This work shall consist of providing on-the-job training aimed at developing workers to the full journeyperson level in the types of trades involved in the project and indicated in the contract documents. Journeyperson as used herein means a craftsperson considered capable of performing all the major duties of a particular trade. The employment and training program will consist of no less than 500 (3 months of training) and no more than 2,000 hours (1 year approx.) depending on contract time of the project.

MATERIALS

- 159.02** The Contractor shall provide all the materials required for the training in the trades specified. This includes all safety equipment necessary.
- 159.03** The Contractor shall provide, for each participant, the following work clothes:
- a. one (1) pair of work boots
 - b. Required safety equipment to perform the job skill selected (googles, hardhats, reflective vests etc.)

*The Department will reimburse up to \$150.00 per trainee selected
The Contractor shall provide evidence of purchase for the clothing. Program participant must sign receipt of items given.*

CONSTRUCTION REQUIREMENTS

- 159.04** Prior to commencing construction, the Contractor shall submit to the Authority (Civil Rights Office) for approval, a training utilization schedule which shall be correlated to the Contractor's construction schedule and a training program to be used for each trade. Trainees will be required to train for the number of hours specified in the proposal schedule. Approval of all training programs shall be obtained from the Authority (Civil Rights Office) prior to commencing work on the project. The Contractor will be credited for each trainee employed on the contract work who is currently enrolled or has become enrolled in an approved program and will be reimbursed for such trainee as provided hereinafter.

**SUPPLEMENTAL SPECIFICATION 159
ON THE JOB TRAINING (OJT)
PROGRAM**

- 159.05** Training and upgrading of women toward journeyperson status is the primary objective of this specification. Accordingly, the Contractor shall make every effort to enroll women (e.g., by conducting systematic and direct recruitment through public and private sources likely to yield women trainees) to the extent that such persons are available within a reasonable area of recruitment. The Contractor shall be responsible for demonstrating the steps that he has taken in pursuance thereof, prior to a determination as to whether the Contractor is in compliance with this specification.
- 159.06** No employee shall be employed as trainee in any classification in which he has successfully completed a training course leading to journeyperson status or in which he has been employed as a journeyperson. The Contractor should satisfy this requirement by including appropriate questions in the employee application or by other suitable means. Regardless of the method used, the Contractor's records should document the findings in each case.
- 159.07** The minimum length and type of training for each classification will be as established in the training program selected by the Contractor and approved by the Authority. The Authority will approve a program if it is reasonably calculated to meet the equal employment opportunity obligations of the Contractor and to qualify the average trainee for journeyperson status in the classification concerned by the end of the training period. Approval or acceptance of a training program shall be obtained from the Authority prior to commencing work on the classifications covered by the program. Some offsite training is permissible as long as the training is an integral part of an approved training program and does not comprise a significant part of the overall training.
- 159.08** Except as otherwise noted below, the Contractor will be reimbursed at the unit bid price per hour of training given an employee on this contract in accordance with an approved training program. As approved by the Engineer, reimbursement will be made for training persons in excess of the number specified herein. This reimbursement will be made even though the Contractor receives additional training program funds from other sources, provided such other sources does not specifically prohibit the Contractor from receiving other reimbursement. Reimbursement for offsite training indicated above may only be made to the Contractor where he/she does one or more of the following and the trainees are concurrently employed on a Federal-aid project; contributes to the cost of the training, provides the instruction to the trainee or pays the trainee's wages during the offsite training period.

**SUPPLEMENTAL SPECIFICATION 159
ON THE JOB TRAINING (OJT)
PROGRAM**

- 159.09** Participants (trainees) of the Program will be paid no less than the **current Federal minimum wage**. Also, all fringes that correspond to the trainees such as those for unskilled labor and/or depending on classification of work being done.
- 159.10** The Contractor shall furnish the trainee a copy of the program he/she will follow in providing the training. The Contractor shall provide each trainee with a certificate indicating the type and length of training satisfactorily completed.
- 159.11** The Contractor shall assume responsibility for the success of the training program and shall enforce rules and disciplinary measures on behavior, tardiness, absences and such other action as may be required.
- 159.12** The Contractor must take into consideration at the moment of bidding that the trainees, if eligible, will be able to join a labor union, with all the rights and privileges that these provide. The Authority nor its representatives have jurisdiction nor will mediate with the arrangement between the trainee and a labor union. The trainees are entitled to receive the same fringe benefits as the other employees of the Contractor, even though they are not members of a labor union. The trainees will be covered by all the labor laws and decrees included in the contract documents.
- 159.13** The Contractor shall provide for the maintenance of records and furnish periodic reports documenting the trainees' performance under this specification.
- 159.14** In the event that a Contractor subcontracts a portion of the contract work, the Contractor must determine how many, if any, hours of training and what trades trainees are to be trained by the sub-contractor. The Contractor shall retain the primary responsibility for meeting the training requirement imposed by this specification. The Contractor shall also insure that this training specification is made applicable to such subcontract.
- 159.15** Where training is provided under a multi-phase training program it is expected that training will be provided continually through all phases to the extent that opportunity for such training exist on the project. Upon satisfactory completion of a phase of training under a multi-phase training program, when further appropriate training is not available and work in the completed phase is available, the trainee shall continue employment, and be compensated at the prevailing wage rate for such work as approved by the Authority.

SUPPLEMENTAL SPECIFICATION 159 ON THE JOB TRAINING (OJT) PROGRAM

PENALTY FOR NONCOMPLIANCE

- 159.16** No payment will be made to the Contractor if either the failure to provide the required training, or the failure to hire the trainee as a journey person, is caused by the Contractor and evidences a lack of good faith on the part of the Contractor in meeting the requirements of this specification. It is normally expected that a trainee will begin his/her training on the project as soon as feasible after start of work utilizing the skill involved and remain on the project as long as training opportunities exist in her work classification or until she has completed her training program. It is not required that all trainees be on board at the same time. A Contractor will have fulfilled his/her responsibilities under this if he/she has provided acceptable training to the number of trainees specified and/or utilized hours indicated. The number trained shall be determined on the basis of the total number of hours indicated in the contract.
- a. If the Contractor's failure to either provide the required training or to employ and compensate a trainee at the prevailing wage rate or minimum federal wage specified for the occupation in which training was provided, following certification of satisfactory completion of such training is caused by the Contractor's failure to meet the requirements of this specification, no reimbursement will be made for any Trainee Man Hours (TMH) recorded as provided to the trainee involved. The foregoing is in addition to any other sanctions for non-compliance with required contract provisions which may be imposed.
 - b. In the event the Contractor fails to provide training as specified in the approved Training Program, the Authority shall withhold payment to the Contractor in an amount equal to three (3) times the wages that would have been earned by trainees had such training been provided. In the event the Contractor fails to pay wages or other compensation due to trainees, the Authority may pay such unpaid amounts directly to the applicable trainees on the Contractor's behalf and deduct as a penalty as amount equal to three (3) times such amount from the payment to the Contractor for the work.

METHOD OF MEASUREMENT

- 159.17** The quantity to be paid for under this item will be the number of Trainee Man Hours (TMH) used and approved in accordance with this specification. Documentation of the number of Trainee Man Hours shall be made by the Contractor in a manner and form satisfactory to the Authority.

**SUPPLEMENTAL SPECIFICATION 159
ON THE JOB TRAINING (OJT)
PROGRAM**

BASIS OF PAYMENT

159.18 The number of Trainee Man Hours determined as provided above will be paid for at the contract unit price per TMH. Such price and payment shall constitute full compensation for providing and administering the required training including all labor, equipment, materials and incidentals necessary to complete this work as specified.

159.19 Payment will be made under:

<u>Pay Item</u>	<u>Pay Unit</u>
Trainee Man Hours	Each

www.viport.com

**April
2017 Issue**

The Disadvantaged Business Enterprise (DBE) Programs of the *Virgin Islands* of the *Virgin Islands Department of Public Works* and *Virgin Islands Port Authority* have prepared a **DBE DIRECTORY OF FIRMS**, containing information related to businesses owned and controlled by minorities and women currently certified with the Uniform Certification program.

The firms listed have met all certification standards set forth in the Code of Federal Regulation (CFR), Title 49 - Transportation. Contractors use the Directory as a basic resource for soliciting participation on Department of Transportation (DOT) - assisted projects. If a firm is not certified as a DBE, A contractor cannot receive credit toward achievement of the DBE participation goal by using the firm.

The Directory is widely disseminated to other government agencies, contractors and the general public. The information included in intended for reference only. The Directory is consistent with the DOT Regulation 49 CFR, Part 26.

ATTENTION

All previous issues of this directory are obsolete. Changes to firm information are **highlighted**. Any information duplicated or stored privately is the responsibility of the DBE firm. All DBE firms are encouraged to compare and update such information as new directories become available.

ATTENTION

The firms included in this Directory are certified as Disadvantaged Business Enterprise (DBE)s by the Virgin Islands Uniform Certification Program. Certification as a DBE does not pre-qualify a firm to bid on specific projects. It is the contractor's responsibility to ascertain the DBEs ability to perform on any given project.

ORGANIZATION OF DIRECTORY

This Directory is divided into three Sections:

- Section I - DBE firms are indexed by page numbers and district
- Section II - DBE firms are listed alphabetically with all pertaining information
- Section III - DBE firms are categorized in the traditional contracting fields

UNIFIED CERTIFICATION PROGRAM

The Code of Federal Regulation (CFR) 49 Part 26, Subpart E § 26.51 (a) states all Department of Transportation (DOT) recipients in the state or territory must participate in a Unified Certification Program (UCP). The UCP intends to adhere to and embed the existing common application procedures to the uniform certification process to ensure reductions in administrative costs and provided more opportunities for small business concerns owned and controlled by DBE's. Any government agency certifying has the responsibility to ensure that these programs promote competitive viability of small disadvantaged concerns in the free market enterprise system; ensure that the certification process is in accordance with Federal Regulation 49 CFR, Part 23 and 26 in "narrowly tailoring requirements in increase effectiveness and reduce burdens", in providing a one-stop shop certification process. The **Virgin Islands Department of Public Works** will be lead agency to coordinate the establishment of the Unified Certification Program within the Territory. The **Virgin Islands Port Authority** is the other component of this agreement. The purpose of this UCP agreement is to identify reciprocal certification requirements of United States Department of Transportation (DOT) Regulation 49 CFR, Part 23 & 26. This UCP process agreement is intended to reduce the procedural burdens on applicants; fulfill the requirements of paperwork reduction; and reduces confusion caused by multiple and potentially conflicting outcomes in certification decisions. Such criteria shall include but not be limited to on-site visit, personal interviews, licenses, analysis of stock ownership listing of equipment, analysis of stocks capacity, listing of work completed, resume of principal owners, financial capacity, and type of work preferred (where applicable). The national standard application will be used in accordance with the final rule.

The purpose of this UCP agreement is to identify reciprocal certification requirements of United States Department of Transportation (DOT) Regulation 49 CFR, Part 23 & 26. This UCP process agreement is intended to reduce the procedural burdens on applicants; fulfill the requirements of paperwork reduction; and reduces confusion caused by multiple and potentially conflicting outcomes in certification decisions. Such criteria shall include but not be limited to on-site visit, personal interviews, licenses, analysis of stock ownership, listing of equipment, analysis of stocks capacity, listing of work completed, resume of principal owners, financial capacity, and type of work preferred (where applicable). The national standard application will be used in accordance with the final rule

2012 U.S. NAICS Titles

NAICS is the North American Industry Classification System. Federal procuring agencies, since October 1, 2000, must use the proper NAICS codes and sized standards in their procurement solicitations. They will use the NAICS code that best describes the principal purpose of the product or service they intend to acquire. How do you find your NAICS code? NAICS Association Lookup up naics.com. Simply enter your product or service in the description area and then locate your business area. Below are some of the more commonly used codes in the DBE Directory:

238350	Carpentry Contractor
237130	Alternative Energy
237310	Highway, Street and Bridge Construction
237990	Other Heavy and Civil Engineering Construction
238110	Poured Concrete Foundation and Structure Contractors
238120	Structural Steel and Precast Concrete Contractors
238140	Masonry Contractors
238190	Other Foundation, Structure and Building Exterior Contractors
238210	Electrical Contractors and Other Wiring Installation Contractors
238220	Plumbing, Heating and Air-Conditioning Contractors
238320	Painting (except roof) Contractors
238910	Site Preparation Contractors
238990	All Other Specialty Trade Contractors
324121	Asphalt Paving Mixture & Block Manufacturing
331419	(Welding Services)
333249	Other Industrial Machinery Manufacturing
423860	Transportation Equipment and Supplies (except Motor Vehicle) Merchant Wholesalers
424930	Flower, Nursery Stock and Florists' Supplies Merchant
444120	Used Car Dealers
444190	Other Building Material Dealers
454319	Other Fuel Dealers
483211	Inland Water Freight Transportation
484110	General Freight Trucking, Local
532412	(Heavy Equipment Rental)
532490	Other Commercial and Industrial Machinery and Equipment Rental and Leasing
541310	Architectural Services
541320	Landscape Architectural Services
541330	Engineering Services
541611	Administrative Management & General Management Consulting Services
541618	Other Management Consulting Services
541720	Research & Development in the Social Sciences and Humanities
561110	Office Administrative Services
561612	Security Guard Services
561720	Janitorial Services
561730	Landscape Services
562111	Solid Waste Collection
562112	Hazardous Waste Collection
562998	All Other Miscellaneous Waste Management Services
811310	Commercial & Industrial Machinery & Equipment Repair & Maintenance
811412	Appliance Repair and Maintenance
